

Professional Range Instruction Simulator **Suite**™

# SYSTEM ACCESSORIES

*“Upgrade or enhance your current PRISim Suite® configuration.”*

## Capture (“Picture-In-Picture” for Judgement Trainer)

With real-time recording, you can play back trainee actions during the training scenario: where they were, what they did and did not do, and what happened as a result. An excellent tool for debriefing!

*Capture (Picture-In-Picture)*

## Flashlight (Variable Lighting)

Instructors can vary the lighting in any scenario, converting your PRISim Suite® training into a night time or low light situation. With a flashlight, trainees can illuminate areas on the screen, learning to address threats under low light conditions.

## Chemical Agent

A laser-equipped Chemical Agent canister provides yet another tool in the arsenal of weaponry for realistic use-of-force training. Full playback and scoring of the spray effectiveness allow instructors to easily evaluate correct deployment of the canisters.

## TASER®

A laser-equipped TASER X26 comes with functioning light, visible aiming laser and interchangeable head attachment for increased training realism. The Judgement Trainer tracks the path of each TASER deployment via a pair of coded laser inserts. When the trainee activates the TASER, if both strikes hit the target the video scenario can branch and play the correct outcome.

*Chemical Spray and Flashlight*

## Muzzle Trace

The PRISim “Muzzle Trace” feature is a tremendous marksmanship and tactical skills conditioning tool. Muzzle Trace allows both the training participant and the instructor to view where the participant’s firearm muzzle was pointed during the scenario. This is accomplished simply by using a PRISim Muzzle Trace laser and activating the feature.

*Laser-modified TASER*
